EXCEPTIONAL DRILLING RESULTS RETURNED FROM THE ANDREW ZINC DEPOSIT

YUKON BASE METAL PROJECT

- Assay results received for a further 16 holes completed during the Company's second phase drilling programme at the Andrew Zinc Deposit
- Exceptional intersections of mineralisation recorded in diamond drilling, including:
 - 55.3m at 11.2% Zn and 3.9% Pb
 - 36.3m at 8.0% Zn and 6.7% Pb
 - 21.2m at 19.6% Zn
 - 38.0m at 5.8% Zn and 2.6% Pb
 - 25.4m at 5.5% Zn and 4.5% Pb
 - 13.0m at 10.4% Zn
 - 10.3m at 14.5% Zn and 1.3% Pb
 - 7.8m at 13.8% Zn and 2.3% Pb
 - 15.0m at 5.4% Zn and 2.4% Pb
 - 27.5m at 4.2% Zn
- Continuity of mineralisation within proposed start up open pit confirmed
- Exceptionally thick high grade mineralisation intersected beneath the proposed start up open pit
- Open pit and/or underground expansion potential confirmed
- Andrew Zinc Deposit remains open along strike and at depth
- Assay results pending for a further 67 completed drill holes

Overland Resources Limited (ASX: OVR) is pleased to advise that it has received analytical results for an additional sixteen (16) diamond drill holes completed during its second phase drilling programme at the Yukon Base Metal Project in Canada. Exceptional analytical results have been returned from these holes, drilled to evaluate the potential beneath the proposed start up open pit as well as to test the continuity of mineralisation within the proposed open pit.

Mineralisation intersected beneath the proposed start up open pit

Drill holes AN08-045, AN08-047, AN08-048, AN08-050 and AN08-053 were drilled to evaluate potential extensions of high grade mineralisation beneath the proposed open pit. Exceptional intersections of mineralisation were recorded in these holes, including:

- 55.3m at 11.2% Zn and 3.9% Pb from 216.4m in AN08-045
- 21.2m at 19.6% Zn from 272.8m in AN08-047
- 36.3m at 8.0% Zn and 6.7% Pb from 221.3m in AN08-048
- 10.3m at 14.5% Zn and 1.3% Pb from 259.8m in AN08-053

Figure 1: AN08-047: Massive sphalerite mineralization within 21.2m at 19.6% Zn from 272.8m.

The exceptionally thick, high grade mineralisation was intersected as much as 100 metres beneath the lower limits of the proposed open pit. These results reinforce the Company's view that there is considerable potential to extend the life of the proposed mining operation at the Andrew Zinc Deposit through open pit expansion and/or underground development.

Mineralisation intersected within the proposed start up open pit

Considerable intersections of thick, high grade mineralisation were recorded in holes drilled to evaluate the continuity of mineralisation within the proposed start up open pit. Analytical results included:

- **38.0m at 5.8% Zn and 2.6% Pb from 136.2m in AN08-082**
- **25.4m at 5.5% Zn and 4.5% Pb from 62.5m in AN08-054**
- **13.0m at 10.4% Zn from 55.8m in AN08-064**
- **7.8m at 13.8% Zn and 2.3% Pb from 60.4m in AN08-052**
- **15.0m at 5.4% Zn and 2.4% Pb from 51.2m in AN08-074**
- **27.5m at 4.2% Zn from 128m in AN08-042**

These results provide the Company further confidence in the continuity of the mineralisation within the proposed start up open pit and indicate that a robust resource has been delineated at the project.

Ongoing work

Ninety five (95) diamond drill holes for more than 17,000 metres have been completed during the Company's second phase drilling programme at the Yukon Base Metal Project. Results have now been reported for 28 holes, with analytical results pending for a further 67 completed drill holes.

Drilling at the project continues, with two diamond drilling rigs currently operating to increase the confidence in the resource, to test for expansions of the resource and to collect further geotechnical information at the Andrew Zinc Deposit. In addition evaluation of numerous high quality "regional" targets proximal to the Andrew Zinc Deposit has commenced.

The Company will continue to announce results from the ongoing drilling programme as they come to hand.
