Overland Resources is pleased to announce that it has located two historical reports containing information indicating significant grades of copper mineralisation in reconnaissance drilling beneath the Harrison's Cu-Ni Mine.

Significant results detailed in these reports include;

- **20m @ 1.89%Cu from surface**
- **7.5m @ 1.62% Cu from 12m**
- **3m @ 0.98% Cu from 3 m**
- **14m @ 0.88% Cu from surface**
- **5m @ 0.65%Cu from 11m**

All drilling is shallow (less than 34m) and the mineralisation is interpreted to remain open along strike and at depth.

The results from the historical reports comprise composite samples for the drilled intervals. The Company has commenced a soil and rock chip sampling programme over the Harrison's Cu-Ni Mine and surrounding areas and will immediately follow this up with a drilling programme in early 2007.

Overland Resources Limited listed on the ASX on November 14, 2006. The Company is committed to the exploration and development of the Peel Ni-Cu project in New South Wales and the Riwaka Ni-Cu-PGE project in New Zealand. Overland Resources is also in advanced stages of negotiation to acquire several base and precious metal projects outside of Australia.
